Summary

Built diverse SaaS products : E-signature modules, Full scale Employee ERP systems, HR Payroll Management System, Sports League Management Platform etc, in architecture first approach focusing on long-term ease of development, scalability, maintainability

- A **Fullstack engineer** owning projects end-to-end, from system design to delivery
- **Single-handedly** led entire projects - **Full stack development**, direct client communication, impact based prioritization, and on-call issues.
- Blend of **strong engineering + product intuition** for user-centric, scalable solutions

Looking for role involving heavy architectural ownership with strong engineering foundations.

Experience

SpotDraft

May 2022 – Feb 2023

Senior Frontend Engineer — Angular, Typescript, SCSS, Clean Architecture

Bangalore

- Rearchitected 'Prepare For Sign' and 'Mobile Signing' modules **from scratch with Clean Architecture**, enforcing **strict dependency rules**, and **creating Abstract Services for each injectable service**, ultimately making the whole module testable by 90% coverage.
- **Created new Embedded App for PDF Signing** that enabled third-party users to securely sign contracts without logging into the system. Used **Nx Monorepos** setup, where codebase is **organized in apps and libraries**. . Coding time reduced by 95% due to re-use of code present in libraries.
- **Developed the 'Signature Packets' feature**, enabling users to generate a unified contract for multiple uploads. **For performance used OnPush change detection strategy reducing re-renders**, ultimately performance increased by 70%.
- Contributed to design system by **creating SCSS partials for typography, spacing, color schemes, SCSS mixins** and variables to enforce consistent **styling across 30+ components, significantly reducing design debt**.
- Led code quality initiatives by **conducting rigorous code reviews** across 5+ member team and **establishing PR standards** for clarity. Also represented the team by presenting updates in company-wide Engineering All Hands sessions, showcasing team progress.

Unthinkable Solutions

July 2020 – Feb 2022

Full Stack Developer — Angular, React, Typescript, NodeJS, Express, PostgreSQL

Gurugram

- **Worked as Solo Contributor, Full-Stack development in Angular, NodeJs, Express and PostgreSQL**, handling everything from architecture, client communication, and on-call issue resolution to delivery.
- In **HRMS, created In-House Datatable from scratch** where everything **from column to cell is configurable**. User can pass a **parser callback** to parse the cell data as well. Extensively used **Typescript for configuration** and **JSON API** for parsing. Improved development speed by 90% across 10+ modules.
- **Implemented secure authentication** using Access and Refresh tokens and **built RBAC permission handling. API built with JWT, Express middlewares and Redis**. At frontend used **Route Guards, Services** to store permissions. Overall access-related reduced bugs by 90%.
- Created **'Batch Import Games'** that imports all the games listed in csv format, checks the validity of data at frontend, then backend imports all the data at once. **Used ExcelJS, convert-excel-to-json**.
- **Dynamic Invoice and Report Generation system**, enabling customizable PDF exports. **Used .pug files, html-pdf** dependencies at backend. It reduced manual effort by 70%.

TDG Labs

Jan 2020 – July 2020

Software Engineer — React, Redux, Material UI (MUI)

Delhi

- **Developed a Sequence Automation module** that enabled users to create multi-step sales workflows (e.g., cold emails, follow-up calls), supports server-side pagination, advanced filtering and sorting. **Used Redux for state management and Redux-saga for side effect handling**, which contributed to 25% increase in lead engagement
- **Introduced design system** and custom design tokens (**spacing, colors, typography**). Used **MUI Theme Provider**. Styling issues reduced by 30% and resulted in a consistent UI.
- **Built custom Buttons, Snackbars, Modals, Loaders, Input fields, and Dropdowns** by customizing MUI primitives. Used **useStyles and makeStyles pattern** and **mapping the class with rule name** as provided by documentation

Technical Skills

Languages: Javascript, Typescript, HTML/CSS, SCSS/SASS, SQL

Architecture: Clean Architecture, Nx Monorepos

Frontend: React, Redux, Angular, RxJs, NgRx, TestBed, RESTful APIs, Lazy loading, Angular Material, Bootstrap, MUI, Tailwind, Responsive Web Design, Storybook

Backend: NodeJs, Express.js, PostgreSQL (knex), REST API development, Authentication (JWT), RBAC

DevOps: Docker, CI/CD (GitHub Actions, GitLab CI, JIRA), Nginx, PM2

Analytics: Datadog, Amplitude

Version Control & Tools: npm, Git, GitHub, GitLab, Bitbucket, Jira, Trello, Figma, ESLint, Prettier, Husky, Swagger (OpenAPI)

Education

Guru Gobind Singh Indraprastha University

2016 – 2020

Bachelor of Technology in Computer Science CGPA - 9.34

Delhi, India

CGPA — 9.34 [University top 10 list]

Achievements

Moment of Honor 

Nov 2020

Delivered MatchRider in 4 months, appreciated for aligning with business needs.

Peer Recognition 

May 2022 – Feb 2023

Consistently recognized for quality work and setting standards.
