Summary

- Senior Frontend & Fullstack Engineer, Open Source Contributor.
- Built E-signature modules, B2B SaaS, ERPs, HR Payroll Systems
- Established AI architecture rules for LLM tools (Claude, Copilot, ChatGPT), improving code correctness

Experience

Open Source & Contract Software Engineer

Feb 2023 – Present

- **Obsidian - Spaced Repetition** - [feat: Enhance review notes sidebar](#)
 - Problem: Poor visibility of overdue and due-today notes in large, nested review hierarchies.
 - Action: Implemented status propagation and visual indicators at file and folder levels to surface note states at a glance.
 - Impact: Improved navigation efficiency and reduced effort required to manage large review trees.
- **Match Officials**
Rate Charts & Payments
 - Problem: Referee compensation varied by league, and settlement rates were manual.
 - Action: Created configurable Rate Charts involving referees fees, platform fees etc. Implemented 2 way settlement - collection from leagues and payouts to Referees while having a platform cut through bill.com APIs infrastructure.
 - Results: Operators onboarded a new league by just assigning specific Rate Chart. Automated fee calculation, and 2 way settlement reduced 50% of helpdesk tickets.

Bulk Game Import

- Problem: Leagues scheduled entire season of games by hand one by one.
- Action: Built an import pipeline handling 1000s of rows per upload. Implemented inplace correction of rows rather than re-upload.
- Results: Cut season setup from hours of manual entry to a single upload. Performance holds as row counts scaled.

SpotDraft

May 2022 – Feb 2023

Senior Frontend Engineer — Angular, Typescript, SCSS, Clean Architecture

Bangalore

- **E-Signature Module** - [workflow demo](#)
 - Problem: Existing signing workflows were not optimized for small screen devices, thus customer experience was not seamless.
 - Action: Separated business logic and UI Layer following 'Clean Architecture' guidelines. Then built new mobile-first signing workflows.
 - Business Impacts: Strengthened the product's competitive positioning by delivering a modern mobile-device signing experience expected from enterprise e-signature solutions, impacting 1000+ customers.
- **Embeddable App for PDF Signing**
 - Problem: Customers could not offer contract signing within their own products and had to redirect users to SpotDraft.
 - Action: Built an embeddable PDF signing application, enabling customers to integrate signing workflows into their own platforms.
 - Business Impact: Unlocked new integration use cases for customers. A high-value customer requested this feature which it got saved from churning.
- **Signature Packets**
 - Problem: Users had to manage multiple contracts separately when handling multiple uploads.
 - Action: Developed Signature Packets feature to unify upto 10 contracts into a single packet.
 - Business Impact: Saved time to manage each individual contract.
- **Code Quality and Standards**
 - Problem: Code quality and review standards varied across the team.
 - Action: Led code quality initiatives through rigorous code reviews, established PR standards.
 - Engineering Impacts: Standardized engineering consistency, reduced review friction.

Unthinkable Solutions

July 2020 – Feb 2022

Full Stack Developer — Angular, React, Typescript, NodeJS, Express, PostgreSQL

Gurugram

- **HR Management System**
 - Problem: Duplicated Data-tables implementations across modules.
 - Action: Created **In-House Angular Data-grid** from scratch, with configurable columns, cells using parser callbacks similar to ag-grid
 - Impact: Enabled plug-and-play adoption across 10+ modules, faster feature delivery and reduced testing overhead.

- **Permission Grid Authorization**

- Problem: Access rules were hardcoded per module, so every new role / permission change required a code change and a release.
- Action: Built permission grid for Superadmin, using auth with JWT, Access/Refresh Tokens and Angular Route Guards at frontend.
- Business Impact: Superadmin now can hide or enable different features to different type of users, as per business requirements.

Plivo

Jan 2020 – July 2020

Software Engineer — React, Redux, Material UI (MUI)

Delhi

- **In-house UI Library**

- Problem: Fragmented UX due to inconsistent UI across the application. Client required consistent UI components on Material Theme.
- Action: Built a shared component library by customizing MUI primitives such as Buttons, Modals, Forms, Dropdowns etc.
- Business Impact: Consistent UI across all modules. Enabled faster feature delivery

Technical Skills

Languages: Javascript, Typescript, HTML/CSS, SCSS/SASS, SQL

Architecture: Clean Architecture, Nx Monorepos

Frontend: React, Redux, Angular, RxJs, NgRx, TestBed, RESTful APIs, Lazy loading, Angular Material, Bootstrap, MUI, Tailwind, Responsive Web Design, Storybook

Backend: NodeJs, Express.js, PostgreSQL (knex), REST API development, Authentication (JWT), RBAC

DevOps: Docker, CI/CD (GitHub Actions, GitLab CI, JIRA), Nginx, PM2

Analytics: Datadog, Amplitude

Version Control & Tools: npm, Git, GitHub, GitLab, Bitbucket, Jira, Trello, Figma, ESLint, Prettier, Husky, Swagger (OpenAPI)

Education

Guru Gobind Singh Indraprastha University

2016 – 2020

Bachelor of Technology in Computer Science CGPA - 9.34 out of 10

Delhi, India

CGPA — 9.34 out of 10 [University top 10 list]

Achievements

[Outstanding Delivery Award](#)

Nov 2020

Delivered MatchRider in just 4 months, appreciated for aligning with business needs.

[Engineering Impact Testimonials](#)

May 2022 – Feb 2023

Elevated engineering quality by establishing code review and development standards.
